The Speed Spool® Baitcast reel was designed for one purpose: Dominating each and every fish.

**Designed Performance**

Our new bait-cast reel by Lew's® is designed for performance and functionality. From the way it conforms to your hand, to the way it reacts crisply and effortlessly to your command, you’ll know the minute you grab onto the Speed Spool® that you’ve got a quality reel.

Your Speed Spool® reel exploits several new developments which will allow you to set yourself apart from the competition.

**High Strength Brass Gearing**

The drive gear, crankshaft, and worm shaft are made of high strength brass for increased strength and durability. In addition to these advantages, brass provides exceptionally low friction to enhance efficiency.

**One-piece Aluminum Frame**

Your Speed Spool® reel utilizes a one-piece all aluminum frame. So you’ll never have to worry about frame twisting and warping.

**Lightweight Machined Aluminum Spool**

The spool on your Lew's® reel has been engineered to maximize casting distance. Anodized to withstand oxidation and abrasion, the lightweight machined aluminum spool with drilled holes to further reduce inertial mass will allow you to propel your lure farther than the competition—and you’ll have a greater degree of control with less standing between you and the fish.

**Anti-reverse Bearing**

The handle on your Speed Spool® reel will only rotate forward for rock solid hook setting power. When you release the handle it will hold its position because of anti-reverse bearings, never losing an inch on your catch; an invaluable property to have when you’re pulling it in.

**Full-release Magnetic Control System**

In order to combat backlash your Speed Spool® reel is furnished with an externally adjustable, full-release magnetic braking system. As the spool accelerates it experiences magnetic resistance, which can be controlled with a dial on the palming side-plate. A full-release magnetic brake has the ability to be backed far enough away from the spool to completely negate any effect on the acceleration of the spool.

**Cast Control System**

A second feature exists to prevent backlash, the Cast Control System. An adjustment knob is found next to the star drag. The function saddles the spool shaft with steady pressure in order to stabilize spool speed.

To calibrate the system reel your lure in until it rests on the tip of the rod, then tighten the knob until taut. Depress the thumb bar, and holding the rod horizontally lose the knob slowly until the lure begins to descend. The spool should continue to spin after the lure contacts the ground, but should not complete more than one full rotation. If the spool does not continue to spin, the knob is too tight. If the spool completes more than one rotation, the knob is too loose. Repeat until you have achieved the desired results.

- One Piece Aluminum Frame
- Magnetic Control System
- Aluminum Bow Shaped Handle
- Carbon Composite Drag
- 14 lb Max Drag Setting
- Machined Aluminum Spool
Maintenance and Care

Lube Port

To remove the palming side plate, loosen screw, pull plunger back then rotate palming side plate up.

When applying lubricant to your Speed Spool® reel, avoid using multi-purpose oil. Use lightweight oils or greases made for fishing reels. Apply oil to all bearings, the crank shaft, and the worm gear. Apply grease to the bushings, pinion gears, drive gears, and crank gears. After usage your reel should be inspected for dirt or sand and cleaned if excessive buildup is present. If your reel has come in contact with saltwater it is important to flush all parts with water, dry and re-lubricate your reel. Through diligent cleaning and maintenance your Lew’s reel will provide you with years of reliability and sound performance.

LOosen SCREW, pull plunger back

TO OPEN, rotate palming side plate up.
